### Purpose

This Federal Motor Vehicle safety Standard (FMVSS) 208 compliance sled test is part of the FMVSS compliance test program conducted for the National Highway Traffic Safety Administration (NHTSA) by the Transportation Research Center Inc. (TRC Inc.) under Contract No. DTNH22-98-D-01055. The purpose of this test was to determine if the subject vehicle, a 2003 Toyota Tacoma regular cab pickup truck, NHTSA No.C35106, meets the performance requirements of FMVSS 208, "Occupant Crash Protection," in the impact simulation sled test mode.

### Test Procedure

This test was conducted in accordance with NHTSA's Office of Vehicle Safety Compliance (OVSC) Laboratory Test Procedure No. TP-208S-01, dated January 15, 1998. Data was obtained relative to FMVSS 208, "Occupant Crash Protection," performance.

The sled test vehicle was instrumented with six (6) accelerometers to measure longitudinal accelerations. The sled was instrumented with one (1) longitudinal accelerometer, which is prefiltered with an analog filter to 200 Hz as an integral part of the sled firing circuit, and two (2) additional accelerometers: the primary accelerometer for pulse and integrated velocity determination and a backup accelerometer. In addition, the sled was instrumented with one (1) light trap to measure velocity and two (2) airbag firing timing circuits.

The sled test vehicle contained two (2) Part 572 E 50th percentile adult male anthropomorphic test devices (dummies). The dummies were positioned in the front outboard designated seating positions according to the dummy placement procedure specified in Appendix B of the Laboratory Test Procedure. The dummies were not restrained by seat belts.

Both dummies were instrumented with head and chest accelerometers to measure longitudinal, lateral, and vertical accelerations; chest deflection potentiometers; left and right femur load cells to measure axial forces; and upper neck load cells to measure longitudinal, lateral, and vertical forces and moments.

The forty-two (42) data channels were digitally sampled at 12,500 samples per second and processed per Sections 11.7 through 11.9 of the Laboratory Test Procedure.

The sled test event was set up to be recorded by one (1) real-time motion picture camera and six (6) high-speed motion picture cameras. The pre-test and post-test conditions were recorded by one (1) real-time motion picture camera.

### Test Results Summary

This FMVSS 208 compliance sled test was conducted by TRC Inc. on May 1, 2003.

The test vehicle, a 2003 Toyota Tacoma Truck, NHTSA No. C35106, does not appear to comply with the performance requirements of FMVSS 208 Section 13.2 (d), axial compression, in the impact simulation sled test mode as measured by Hybrid III 50<sup>th</sup> percentile male dummies.

	FMVSS 208 Max. Allowable Injury Assessment Values	Driver	Passenger
HIC	1000	331	456
Chest g	60 g	39.7	34.0
Chest Displacement	3 inches	1.3	0.4
Left Femur	2250 lbs	1375	824
Right Femur	2250 lbs	782	928
Neck Extension	57 Nm	24.6	24.7
Neck Flexion	190 Nm	49.6	86.2
Neck Tension	3300 N	802	332
Neck Compression	4000 N	3324	4195
Neck Shear	3100 N	1099	1800

The subject vehicle, a 2003 Toyota Tacoma, NHTSA No. C35106, appears to meet the other FMVSS 208 requirements for which it was tested. These results are shown in the data sheets that are included in this report.

The sled test vehicle was equipped with air bags at the driver and passenger seating positions. The dummies were not restrained by seat belts. The sled carriage was accelerated to 18.1 g with an integrated velocity change of 29.8 mph. The single stage airbag inflators were triggered at 20.2 milliseconds after 0.5 g acceleration was measured by the firing circuit. Following subsequent digital data processing and filtering the acceleration signal to Channel Class 60, the single stage airbag event trigger signal was 20.8 ms after the 0.5 g acceleration level was indicated.

### Sled Test Summary

NHTSA number: C35106  
Test type: Alternate FMVSS 208 Sled  
Test date: 05/01/03  
Test time: 1125  
Ambient temperature at impact area: 70.8° F  
Vehicle year/make/ model/body style: 2003/Toyota/Tacoma/Truck (regular cab pickup truck)

#### Dummy Info:

	Driver #314	Front #229
Type:	Hybrid III 50 <sup>th</sup> male	Hybrid III 50 <sup>th</sup> male
Location:	Left Front	Right Front
Restraint:	Airbag	Airbag
Number of data channels:	15	15

#### Number of Cameras:

Real-time:	1 (Did not run)
High-speed:	6

#### Door Opening Data:

Left Front:	Easy
Right Front:	Easy

#### Front Seat Data:

Seat track failure:	None	None
Seat back failure	None	None

#### Visible Dummy Contact Points:

Head:	Airbag, windshield, headrest	Airbag, sun visor, headrest
Chest:	Airbag	Airbag
Left knee:	Knee Bolster	Glove Box
Right knee:	Knee Bolster	Glove Box

General Test and Vehicle Parameter Data for the Sled Test Vehicle

Test Vehicle Information:

Vehicle year/make/  
model/body style: 2003/Toyota/Tacoma/Truck (regular cab pickup truck)

Color: Mystic Gold Metallic/Oak

VIN: 5TENL42N33Z228611

NHTSA number: C35106

Engine data:

Placement: Inline

Cylinders: 4

Displacement: 2.4

Transmission data: 5 speed, X manual,    automatic, X overdrive

Final drive:    fwd, X rwd,    4wd

Date vehicle received: 04/08/2003

Odometer reading: 39

Dealer's name  
and address: Tanksy Sawmill Toyota  
6300 Sawmill Road  
Dublin, OH 43017

Major Options:

Power steering	Yes	Other: 4-wheel anti-lock brakes, passenger airbag cutoff switch, belt pretensioners and force limiters, CRS top tether, ISO fix
Power brakes	Yes	
Power windows	No	
Air conditioning	Yes	
Power door locks	No	

Remarks:

General Test and Vehicle Parameter Data for the Sled Test Vehicle, Cont'd.

Data from Vehicle's Certification Label:

Vehicle manufactured by: Toyota Motor Manufacturing, California, Inc.  
Date of manufacture: 3/03  
VIN: 5TENL42N33Z228611  
GVWR: 4250 lbs  
GAWR: Front: 2200 lbs  
Rear: 2500 lbs

Data from Vehicle's Tire Placard:

Tire pressure with maximum capacity vehicle load:

Front: 44 psi  
Rear: 44 psi

Recommended tire size: P205/75R15 or P235/55R16

Load index/speed ratings: 97S (with P205/75R15) or 96T (with P235/55R16)

Recommended cold tire pressure:

Front: 29 psi  
Rear: 29 psi

Size of tires on vehicle: P205/70R15

Spare tire: P205/70R15

Vehicle capacity data:

Type of front seats: Bench

Number of occupants (from count of seat belts):

Front 3  
Rear N/A  
Total 3

Remarks: None

General Test and Vehicle Parameter Data for the Sled Test Vehicle, Cont'd

Weight of test vehicle as received (with maximum fluids):

Right front	782.6 lbs	Right rear	601.9 lbs
Left front	826.7 lbs	Left rear	611.8 lbs
Total front weight	1609.3 lbs	(57.0% of total vehicle weight)	
Total rear weight	1213.7 lbs	(43.0% of total vehicle weight)	
Total delivered weight	2823.0 lbs		

Calculation of test vehicle's target test weight:

RCLW = Rated Cargo and Luggage Weight

UDW = Unloaded Delivered Weight (2823.0 lbs)

DSC = Designated Seating Capacity (3)

RCLW<sup>1</sup> = 300 lbs

Target test weight = UDW + RCLW<sup>1</sup> + (Number of Hybrid III dummies x 167 lbs per dummy)

Target test weight = 2823.0 + 300<sup>1</sup> + 334 = 3457.0 lbs

Weight of test vehicle with two dummies and 301.0 lbs of cargo weight:

Right front	845.5 lbs	Right rear	851.0 lbs
Left front	896.2 lbs	Left rear	865.3 lbs
Total front weight	1741.7 lbs	(50.4% of total vehicle weight)	
Total rear weight	1716.3 lbs	(49.6% of total vehicle weight)	
Total test weight	3458.0 lbs		

Remarks:

Weight of ballast secured in vehicle cargo area: None

Components removed to meet target test weight: N/A

<sup>1</sup> RCLW is set at a maximum of 300 lbs for target test weight determination.

General Test and Vehicle Parameter Data for the Sled Test Vehicle, Cont'd.

Test Vehicle Attitude:

As delivered door sill angle: 1.8° Nose Down

As tested door sill angle: 1.7° Nose Down

Fully loaded door sill angle: 1.1° Nose Down

Vehicle Wheelbase: 103.3 inches

Fuel System Data:

Fuel system capacity from owner's manual: 16.0 gallons

Useable capacity figure furnished by COTR: 16.0 gallons

Remarks: The roll angle measurements were within 1 inch of each other.

The left and right side measurements were 34.9 inches and 34.9 inches respectively.

Post-Impact Data

Test number: S030501  
NHTSA number: C35106  
Test date: 05/01/03  
Test time: 1125  
Test type: Alternate FMVSS 208 Sled  
Impact angle: 0°  
Ambient temperature  
at impact area: 70.8° F  
Temperature in  
occupant compartment: 70.8° F

Sled carriage velocity:

Integrated velocity from the integration of the entire sled acceleration: 29.8 mph  
Measured velocity from the light trap device attached to the sled (backup): 29.4 mph  
Specified integrated velocity range: 28 to 30 mph

Sled carriage acceleration:

Acceleration: 18.1 g  
Specified acceleration range: 16.0 g - 18.2 g

Sled carriage acceleration duration:

Time from T-0(-0.5 g) to 0.0 g: 121.8 ms  
Specified acceleration duration: 120 - 130 ms

The sled acceleration curve was within the specified corridor.

## Seat and Steering Column Positioning Data

Vehicle: 2003/Toyota/Tacoma/Truck

NHTSA No.: C35106

### Nominal Design Riding Position:

Driver Seat:      Seat Back Angle =  $20.3^\circ$  Fixed seat back position.

Passenger Seat:      Seat Back Angle =  $20.3^\circ$  Fixed seat back position.

### Seat Fore and Aft Positions:

Driver Seat:      Mid position - manual adjustment. The bench seat was moved full forward and full rearward, marking each of 12 latch positions. There was no latch position at center of travel. The seat was set in the 7<sup>th</sup> latch (counting 1 as full forward) of 12 positions.

Passenger:      Passenger seat was not independently adjustable from driver seat.

### Steering Column Adjustments:

The steering column was not adjustable.

# Dummy Measurement Data for Front Seat Occupants

Designation	Type of Measurement	Driver (Serial #314)	Passenger (Serial #229)
WA	Windshield angle	38.0°	N/A
SWA	Steering wheel angle	26.8°	N/A
SCA	Steering column angle	63.2°	N/A
SA	Seat back angle	20.3°	20.3°
HZ	Head to roof	8.2 in	7.7 in
HH	Head to header	17.0 in	17.0 in
HW	Head to windshield	22.4 in	13.4 in
HR	Head to side header	8.8 in	9.6 in
NR	Nose to rim	17.4 in	N/A
NA	Nose to rim angle	9.2°	N/A
CD	Chest to dash	23.0 in	21.9 in
CS	Steering wheel to chest	12.2 in	N/A
RA	Rim to abdomen	7.8 in	N/A
KDL	Left knee to dash	7.7 in	6.7 in
KDR	Right knee to dash	7.7 in	6.5 in
KDA	Outboard knee to dash angle	14.6°	22.4°
PA	Pelvis angle	22.5°	23.8°
TA	Tibia angle	38.8°	38.1°
KK	Knee to knee	13.4 in	10.6 in
ST <sup>1</sup>	Striker to head	21.1 in	22.5 in
	Striker to head angle	71.0°	73.3°
SK <sup>1</sup>	Striker to knee	28.3 in	27.7 in
	Striker to knee angle	2.5°	1.3°
SH <sup>1</sup>	Striker to H-point	14.4 in	13.9 in
	Striker to H-point angle	24.9°	191.0°
SIY	Striker to H-point (Y dir.)	8.7 in	9.1 in
HS	Head to side window	12.4 in	12.8 in
HD	H-point to door	5.7 in	5.7 in
AD	Arm to door	3.9 in	3.9 in

The seat back angle (SA°) is measured relative to vertical.

All other angles are measured relative to horizontal.

<sup>1</sup> A negative angle indicates the measurement point was located below the striker.

# Dummy Measurement Locations for Front Seat Occupants

### Descriptions of Dummy Measurements

When a level is to be used, it is to ensure that the line containing the two points described is either parallel or perpendicular to the ground. If a measurement to be made is less than 10 inches ignore the directions to use a level and approximate a level measurement. Also, when a measurement is to be taken to or from the center of a bolt on the dummy, take the measurement from the center of the bolt hole if the bolt is recessed.

**The following measurements are to be made within a vertical longitudinal plane.**

- \* HH Head to Header, taken from the point where the dummy's nose meets his forehead (between his eyes) to the furthest point forward on the header.
- \* HW Head to Windshield, taken from the point where the dummy's nose meets his forehead (between his eyes) to a point on the windshield. Use a level.
- HZ Head to Roof, taken from the point where the dummy's nose meets his forehead (between his eyes) to the point on the roof directly above it. Use a level.
- \* CS Steering Wheel to Chest, taken from the center of the steering wheel hub to the dummy's chest. Use a level.
- \* CD Chest to Dash, place a tape measure on the tip of the dummy's chin and rotate five inches of it downward toward the dummy to the point of contact on the transverse center of the dummy's chest. Then measure from this point to the closest point on the dashboard either between the upper part of the steering wheel between the hub and the rim, or measure to the dashboard placing the tape measure above the rim, whichever is a shorter measurement. See diagram.
- RA Steering Wheel Rim to Abdomen, taken from the bottommost point of the steering wheel rim horizontally rearward to the dummy. Use a level.
- NR Nose to Rim, taken from the tip of the dummy's nose to the closest point on the top of the steering wheel rim. Also indicate the angle this line makes with respect to the horizontal (NA).

\* Measurement used in Data Tape Reference Guide

Descriptions of Dummy Measurements, Cont'd.

- \*<sup>1</sup> KDL,  
KDR Left and Right Knees to Dashboard, taken from the center of the knee pivot bolt's outer surface to the closest point forward acquired by swinging the tape measure in continually larger arcs until it contacts the dashboard. Also reference the angle of this measurement with respect to the horizontal for the outboard knee (KDA). See diagram.
- SH,  
SK,  
ST Striker to Hip, Knee, and Head, these measurements are to be taken in the X-Z plane measured from the forward most center point on the striker to the center of the H-point, outer knee bolt, and head target. When taking this measurement a firm device that can be rigidly connected to the striker should be used. Use a level. The angles of these measurements with respect to the horizontal should also be recorded. The measurement in the Y (transverse) direction from the striker to the H-point should also be taken (SHY). See diagram.

**The following measurements are to be made within a vertical transverse plane.**

- HS Head to Side Window, taken from the point where the dummy's nose meets his forehead (between his eyes) to the outside of the side window. In order to make this measurement, roll the window down to the exact height which allows a level measurement. Use a level. See diagram.
- \* AD Arm to Door, taken from the outer surface of the elbow pivot bolt on a Hybrid II dummy to the first point it hits on the door. In the case of a Hybrid III dummy, measure from the bolt on the outer biceps. When a SID is used make the measurement from the center of the bottom of the arm segment where it meets the dummy's torso.
- \* HD H-point to Door, taken from the H-point on the dummy to the closest point on the door. Use a level.
- \* HR Head to Side Header, measure the shortest distance from the point where the dummy's nose meets his forehead (between his eyes) to the side edge of the header just above the window frame, directly adjacent to the dummy.

\* Measurement used in Data Tape Reference Guide

<sup>1</sup> Only outboard measurement is referenced in Data Tape Reference Guide

### Descriptions of Dummy Measurements, Cont'd.

- SHY Striker to H-point, taken from a rod rigidly connected to the forward most center point on the striker to the H-point. Use a level. See diagram.
- KK Knee to Knee, for Hybrid II dummies measure the distance between knee pivot bolt head outer surfaces. For Hybrid III dummies measure the distance between the outboard knee clevis flange surfaces. (This measurement may not be exactly transverse.)

### **Angles**

- SA Seat Back Angle, find this angle using the instructions provided by the manufacturer. If the manufacturer doesn't provide clear instructions contact the COTR.
- PA Pelvis or Femur Angle, taken by inserting the pelvic angle gauge into the H-point gauging hole on the SID or the Hybrid III dummies and taking this angle with respect to the horizontal. Measure the angle of the line connecting the H-point hole and the outer knee pivot bolt hole on a Hybrid II dummy with respect to the horizontal, to find the femur angle.
- SWA Steering Wheel Angle, find this by placing a straight edge against the steering wheel rim along the longitudinal plane. Then measure the acute angle of the straight edge with respect to the horizontal.
- SCA Steering Column Angle, measured with respect to the horizontal by placing an inclinometer on the center of the underside of the steering column.
- NA Measure the angle made when taking the measurement NR with respect to the horizontal.
- KDA Knee to Dash Angle, the angle that the measurement KD is taken at with respect to the horizontal. Only get this angle for the outboard knee. See diagram.
- WA Windshield Angle, place an inclinometer along the transverse center of the windshield exterior (measurement is made with respect to horizontal).
- TA Tibia Angle, use a straight edge to connect the dummy's knee and ankle bolts. Then place an inclinometer on the straight edge and measure the angle with respect to the horizontal.

\* Measurement used in Data Tape Reference Guide

**FMVSS 208 Seat Belt Warning System Check**

Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck

NHTSA No.: C35106

Technician: Ron Stoner

Date: 04/14/2003

Complete the following to determine which seat belt warning system option (S7.3(a)(1) or S7.3(a)(2)) is used. (Manufacturers may use either option.)

- A. With occupant in driver's position and lap belt in stowed position and ignition switch placed in "Start/On" position:

A.1 S7.3(a)(1)

Time duration of audible warning signal = 5 seconds  
(4 to 8 seconds)

Time duration of reminder light operation = remains on  
(no less than 60 seconds)

A.2 S7.3(a)(2)

Time duration of audible warning signal = seconds  
(4 to 8 seconds) (sec 49 USCS @ 30124)

Time duration of reminder light operation = seconds  
(4 to 8 seconds)

- B. With occupant in driver's position and lap belt in use and the ignition switch placed in "Start/On" position:

B.1 S7.3(a)(1)

Time duration of audible warning signal = 0 seconds  
(audible warning should not operate)

Time duration of reminder light operation = 0 seconds  
(reminder light does not operate)

B.2 S7.3(a)(2)

Time duration of audible warning signal = seconds  
(audible warning should not operate)

Time duration of reminder light operation = seconds  
(4 to 8 seconds)

- C. Note wording of visual warning:

Fasten Seat Belt

Fasten Belt

**FMVSS 208 Readiness Indicator**

Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck

NHTSA No.: C35106

Technician: Ron Stoner

Date: 04/14/2003

An occupant restraint system that deploys in the event of a crash shall have a monitoring system with a readiness indicator. A totally mechanical system is exempt from this requirement (11/8/94 legal interpretation).

Is the system totally mechanical?

☐ Yes;

☒ No

Describe the location of the readiness indicator: Bottom left on instrument cluster

Is the readiness indicator clearly visible to the driver?

☒ Yes;

☐ No

Is a list of the elements in the occupant restraint system, being monitored by the readiness indicator, provided?

☒ Yes;

☐ No

**FMVSS 208 Air Bag Labels**

Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck

NHTSA No.: C35106

Technician: Ron Stoner

Date: 04/14/2003

**1. Air Bag Maintenance Label and Owner's Manual Instructions:**

1.1 Does the manufacturer recommend periodic maintenance or replacement of the air bag? ☐ Yes (Go to 1.2)

☒ No (Go to 2)

1.2 Does the Vehicle have a maintenance or replacement label?

☐ Yes-Pass

☐ No-Fail

1.3 Does the label contain one of the following?

☐ Yes-Pass

☐ No-Fail

☐ Schedule on label specifies month and year

☐ Schedule on label specifies vehicle mileage

☐ Schedule on label specifies interval measured from date on certification label

1.4 Is the label permanently affixed within the passenger compartment?

☐ Yes-Pass

☐ No-Fail

1.5 Is the label lettered in English?

☐ Yes-Pass

☐ No-Fail

1.6 Is the label in block capitals and numerals?

☐ Yes-Pass

☐ No-Fail

1.7 Are the letters and numerals at least 3/32 inch high?

☐ Yes-Pass

☐ No-Fail

1.8 Does the owner's manual set forth the recommended schedule for maintenance or replacement?

☐ Yes-Pass

☐ No-Fail

**2. Does the owner's manual: (S4.5.1 (f))**

2.1 Include a description of the vehicle's air bag system in an easily understandable format? ☒ Yes ☐ No-Fail

2.2 Include a statement that the vehicle is equipped with an air bag and a lap/shoulder belt at the front outboard seating positions? ☒ Yes ☐ No-Fail

**FMVSS 208 Air Bag Labels, Cont'd.**

- 2.3 Include a statement that the air bag is a supplemental restraint at the front outboard seating positions? ☒ Yes ☐ No-Fail
- 2.4 Emphasize that all occupants, including the driver, should always wear their seat belts whether or not an air bag is also provided at their seating positions to minimize the risk of severe injury or death in the event of a crash? ☒ Yes ☐ No-Fail
- 2.5 Provide any necessary precautions regarding the proper positioning of occupants, including children, at seating positions equipped with air bags to insure maximum safety protection for those occupants? ☒ Yes ☐ No-Fail
- 2.6 Explain that no objects should be placed over or near the air bag on the steering wheel or on the instrument panel, because any such objects could cause harm if the vehicle is in a crash severe enough to cause the air bag to inflate? ☒ Yes ☐ No-Fail

**3. Does the Vehicle:**

- 3.1 Provide an automatic means to ensure that the air bag does not deploy when a child seat or child with a total mass of 30 kg or less is present on the front outboard seat? ☐ Yes ☒ No
- 3.2 Incorporate sensors, other than or in addition to weight sensors, which automatically prevent the passenger air bag from deploying in situations in which it might have an adverse effect on infants in rear-facing child seat, and unbelted or improperly belted children? ☐ Yes ☒ No
- 3.3 Have a passenger air bag designed to deploy in a manner that does not create a risk of serious injury to infants in rear-facing child seats, and unbelted or improperly belted children? ☐ Yes ☒ No

**If yes to 3.1, or 3.2, or 3.3, the vehicle is not required to have a Sun Visor Warning Label (S4.5.1(b)), an air bag alert label (S4.5.1(c)) or a label on the dash (S4.5.1(e)) and this check sheet is complete. (S4.5.1) If no to 3.1, 3.2, and 3.3, go to 4.**

FMVSS 208 Air Bag Labels, Cont'd.

4. Sun Visor Warning Label

- 4.1 Is the label permanently affixed (may be permanent marking or molding) to either side of the sun visor at each front outboard seating position with an air bag?

Driver side ☒ Yes-Pass ☐ No-Fail

Passenger side ☒ Yes-Pass ☐ No-Fail

- 4.2 Does the label conform in content (vehicles without back seats may omit the statement: "The BACK SEAT is the SAFEST place for children.") (S4.5.1(b)(2)(v)) to the label shown in either Figure 6a or 6b as appropriate at each front outboard seating position with an air bag? (S4.5.1(b)(2))

4.2.1 Dual air bags

Driver side ☒ Yes-Pass ☐ No-Fail

Passenger side ☒ Yes-Pass ☐ No-Fail

- 4.2.2 Vehicles with driver air bag ONLY - either 4.2.1 or 4.2.2 is applicable, not both. (S4.5.1(b)(2)(iv))

- 4.2.2.1 Does the label conform on content to the label shown in either Figure 6a or 6b as appropriate?

☒ N/A

Driver side ☐ Yes-Pass ☐ No-Fail

- 4.2.2.2 Does the label conform in content to the label shown in Figure 6a where the label can be modified to omit the pictogram and the message may read:

DEATH or SERIOUS INJURY can occur.

- . Sit as far back as possible from the air bag.
- . ALWAYS use SEAT BELTS and CHILD RESTRAINTS.
- . The BACK SEAT is the SAFEST place for children.

☒ N/A

Driver side ☐ Yes-Pass ☐ No-Fail

Driver side	<input checked="" type="checkbox"/> Yes-Pass	<input type="checkbox"/> No-Fail
Passenger side	<input type="checkbox"/> No air bag	<input checked="" type="checkbox"/> Yes-Pass
		<input type="checkbox"/> No-Fail

- 4.5 Is the message area at least 30 cm<sup>2</sup>? (S4.5.1(b)(2)(ii))

Actual message area, driver side 30.9 cm<sup>2</sup>

Actual message area, passenger side 30.9 cm<sup>2</sup>

Driver side	<input checked="" type="checkbox"/> Yes-Pass	<input type="checkbox"/> No-Fail
Passenger side	<input type="checkbox"/> No air bag	<input checked="" type="checkbox"/> Yes-Pass
		<input type="checkbox"/> No-Fail

# **FMVSS 208 Air Bag Labels, Cont'd.**

- 4.6 Is the pictogram black with a red circle and slash on a white background? (S4.5.1(b)(2)(ii)) & (S4.5.1(b)(2)(iv))

For vehicles with driver side air bag ONLY

☐ N/A

Driver side

☒ Yes-Pass

☐ No-Fail

Passenger side

☐ No air bag

☒ Yes-Pass

☐ No-Fail

- 4.7 Is the pictogram at least 30 mm in diameter? (S4.5.1(b)(2)(iii))

Actual diameter, driver side 30 mm

Actual diameter, passenger side 30 mm

For vehicles with driver side air bag ONLY

☐ N/A

Driver side

☒ Yes-Pass

☐ No-Fail

Passenger side

☐ No air bag

☒ Yes-Pass

☐ No-Fail

- 4.8 Is the same side of the sun visor to which the sun visor label is affixed free of other information with the exception of an air bag maintenance label? (S4.5.1(b)(3)) and/or a rollover warning label specified in 49CFR Part 575 (S575.105)?

Driver side

☒ Yes-Pass

☐ No-Fail

Passenger side

☐ No air bag

☒ Yes-Pass

☐ No-Fail

- 4.9 Is the sun visor free of other information about air bags or the need to wear seat belts with the exception of the air bag alert label or the utility vehicle label?

Driver side

☒ Yes-Pass

☐ No-Fail

Passenger side

☐ No air bag

☒ Yes-Pass

☐ No-Fail

## 5. Air Bag Alert Label

- 5.1 Is the Sun Visor Warning Label visible when the sun visor is in the stowed position?

Driver

☒ Yes

☐ No

Passenger

☒ Yes

☐ No

If yes, go to 6

- 5.2 Does the label conform in content to the label shown in Figure 6c?

(S4.5.1(c)(2))

☐ Yes-Pass

☐ No-Fail

**SUN VISOR LABEL VISIBLE WHEN VISOR IS IN UP POSITION**

Circle and Line Red with White Background

Artwork Black with White Background

Text Yellow with Black Background

(S4.5.1(c)(2))

**FMVSS 208 Air Bag Labels, Cont'd.**

- 5.3 Is the message area black with yellow text? (S4.5.1(c)(2)(i))  
☐ Yes-Pass ☐ No-Fail
- 5.4 Is the message area at least 20 cm<sup>2</sup>? (S4.5.1(c)(2)(i))  
Actual message area N/A cm<sup>2</sup> ☐ Yes-Pass ☐ No-Fail
- 5.5 Is the pictogram black with a red circle and slash on a white background?  
(S4.5.1(c)(2)(ii))

For vehicles with driver side air bag ONLY ☒ N/A  
☐ Yes-Pass ☐ No-Fail

- 5.6 Is the pictogram at least 20 mm in diameter? (S4.5.1(c)(2)(ii))  
Actual diameter is N/A mm

For vehicles with driver side air bag ONLY ☒ N/A  
☐ Yes-Pass ☐ No-Fail

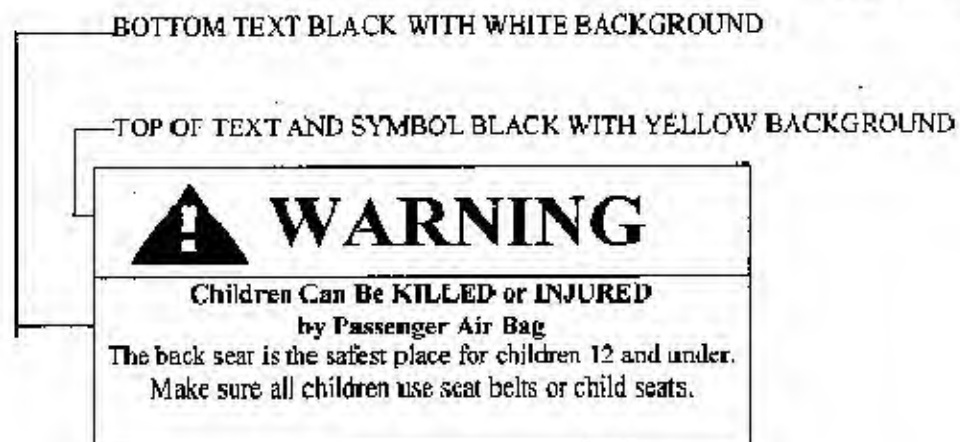

6. Label On the Dash

- 6.1 Does the vehicle have a passenger air bag?  
☒ Yes ☐ No

**If no, this checklist is complete.**

- 6.2 Does the vehicle have a label on the dash or steering wheel hub? (S4.5.1(e))  
☒ Yes-Pass ☐ No-Fail
- 6.3 Does the label conform in content (vehicles without back seats may omit the statement: "The back seat is the safest place for children 12 and under.") (S4.5.1(e)(iii)) to the label shown in Figure 7? (S4.5.1(e))  
☒ Yes-Pass ☐ No-Fail

Figure 7  
(S4.5.1(e))

**FMVSS 208 Air Bag Labels, Cont'd.**

- 6.4 Is the heading area yellow with the word "warning" and the alert symbol in black?  
(S4.5.1(e)(i)) ☒ Yes-Pass ☐ No-Fail
- 6.5 Is the message white with black text? (S4.5.1(e)(ii))  
☒ Yes-Pass ☐ No-Fail
- 6.6 Is the message area at least 30 cm<sup>2</sup>? (S4.5.1(e)(ii))  
Actual message area 30 cm<sup>2</sup> ☒ Yes-Pass ☐ No-Fail

**FMVSS 208 Rear Outboard Seating Position Seat Belts**

Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck

NHTSA No.: C35106

Technician: Ron Stoner

Date: 05/01/03

Do all rear outboard seating positions have type 2 seat belts?

☐ Yes;

☐ No;

☒ N/A (No Back Seat)

If No, describe the seat belt installed, the seat location, and any other information about the seat that would explain why a type 2 belt was not installed.

**FMVSS 208 Lap Belt Lockability**

Passenger cars, trucks, buses, and multipurpose passenger vehicles with a GVWR of 10,000 pounds or less. (S7.1.1.5)

Complete one of these forms for **each** designated seating position with forward-facing seats, other than the driver's seat, or seats that can be adjusted to forward-facing **and** that has seat belt retractors that are not automatic retractors. (S7.1.1.5(c))

Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck

NHTSA No.: C35106

Technician: Ron Stoner

Date: 04/14/2003

Designated Seating Position: Right Front

- ☒ 1. Record test seat position: Middle  
(S7.1.1.5(c)(1)) (Any position is acceptable.)
- ☒ 2. Buckle the seat belt. (S7.1.1.5(c)(1))
- ☒ 3. Complete any procedures recommended in the vehicle owner's manual to activate any locking feature. (S7.1.1.5(c)(1))
- ☒ 4. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT have to be attached by the vehicle user to the seat belt webbing, retractor, or any other part to the vehicle?  
(S7.1.1.5(a)) ☒ Yes-Pass ☐ No-Fail
- ☒ 5. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT require inverting, twisting or deforming of the belt webbing? (S7.1.1.5(a)) ☒ Yes-Pass ☐ No-Fail
- ☒ 6. Does the vehicle user need to take some action to activate the locking feature on the lap belt portion of the seat belt in any forward-facing seat or seat that can be adjusted to forward-facing?  
If yes, go to 6.1. If no, go to 7. ☒ Yes ☐ No
- 6.1 Does the vehicle owner's manual include a description in words and/or diagrams describing how to activate the locking feature so that the seat belt assembly can tightly secure a child restraint system and how to deactivate the locking feature to remove the child restraint system. (S7.1.1.5(b)) ☒ Yes-Pass ☐ No-Fail

**FMVSS 208 Lap Belt Lockability, Cont'd.**

Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck

NHTSA No.: C35106

Technician: Ron Stoner

Date: 04/14/2003

Designated Seating Position: Right Front

- ☒ 7. Locate a reference point A on the seat belt buckle. (S7.1.1.5(c)(2))
- ☒ 8. Locate a reference point B on the attachment hardware or retractor assembly at the other end of the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))
- ☒ 9. Adjust the lap belt or lap belt portion of the seat belt assembly according to any procedures recommended in the vehicle owner's manual to activate any locking feature so that the webbing between points A and B is at the maximum length allowed by the belt system. (S7.1.1.5(c)(2))
- ☒ 10. Measure and record the distance between points A and B along the longitudinal centerline of the webbing for the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2)) Measured distance between A and B 58.7 inches.
- ☒ 11. Readjust the belt system so that the webbing between points A and B is at any length that is 5 inches or more shorter than the maximum length of the webbing. (S7.1.1.5(c)(3))
- ☒ 12. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4)) Measured force application angle 10 degrees. (Spec. 5-15 degrees)
- ☒ 13. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4)) Measured distance between A and B 23.2 inches.

**FMVSS 208 Lap Belt Lockability, Cont'd.**

Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck

NHTSA No.: C35106

Technician: Ron Stoner

Date: 04/14/2003

Designated Seating Position: Right Front

- ☒ 14. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load **in** not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

Record onset rate 25 lbs/sec (spec. 10 -50 lb/sec)

The measured distance between A and B is 23.6 inches (S7.1.1.5(c)(6))

- ☒ 15. Subtract the measurement in 13 from the measurement in 14. Is the difference 2 inches or less? (S7.1.1.5 (c)(7))

14-13= 0.4 inches

☒ Yes-Pass

☐ No-Fail

- ☒ 16. Subtract the measurement in 14 from the measurement in 10. Is the difference 3 inches or more? (S7.1.1.5(c)(8))

10-14= 35.1 inches.

☒ Yes-Pass

☐ No-Fail

**FMVSS 208 Lap Belt Lockability**

Passenger cars, trucks, buses, and multipurpose passenger vehicles with a GVWR of 10,000 pounds or less. (S7.1.1.5)

Complete one of these forms for **each** designated seating position with forward-facing seats, other than the driver's seat, or seats that can be adjusted to forward-facing **and** that has seat belt retractors that are not automatic retractors. (S7.1.1.5(c))

Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck

NHTSA No.: C35106

Technician: Ron Stoner

Date: 04/14/2003

Designated Seating Position: Middle Front; Does not apply - lap belt only - no retractor

- ☐ 1. Record test seat position: Middle  
(S7.1.1.5(c)(1)) (Any position is acceptable.)
- ☐ 2. Buckle the seat belt. (S7.1.1.5(c)(1))
- ☐ 3. Complete any procedures recommended in the vehicle owner's manual to activate any locking feature. (S7.1.1.5(c)(1))
- ☐ 4. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT have to be attached by the vehicle user to the seat belt webbing, retractor, or any other part to the vehicle? (S7.1.1.5(a)) ☐ Yes-Pass ☐ No-Fail
- ☐ 5. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT require inverting, twisting or deforming of the belt webbing? (S7.1.1.5(a)) ☐ Yes-Pass ☐ No-Fail
- ☐ 6. Does the vehicle user need to take some action to activate the locking feature on the lap belt portion of the seat belt in any forward-facing seat or seat that can be adjusted to forward-facing?

If yes, go to 6.1. If no, go to 7.

☐ Yes

☐ No

6.1 Does the vehicle owner's manual include a description in words and/or diagrams describing how to activate the locking feature so that the seat belt assembly can tightly secure a child restraint system and how to deactivate the locking feature to remove the child restraint system. (S7.1.1.5(b)) ☐ Yes-Pass ☐ No-Fail

**FMVSS 208 Lap Belt Lockability, Cont'd.**

Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck

NHTSA No.: C35106

Technician: Ron Stoner

Date: 04/14/2003

Designated Seating Position: Middle Front

- ☐ 7. Locate a reference point A on the seat belt buckle. (S7.1.1.5(c)(2))
- ☐ 8. Locate a reference point B on the attachment hardware or retractor assembly at the other end of the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))
- ☐ 9. Adjust the lap belt or lap belt portion of the seat belt assembly according to any procedures recommended in the vehicle owner's manual to activate any locking feature so that the webbing between points A and B is at the maximum length allowed by the belt system. (S7.1.1.5(c)(2))
- ☐ 10. Measure and record the distance between points A and B along the longitudinal centerline of the webbing for the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2)) Measured distance between A and B \_\_\_\_ inches.
- ☐ 11. Readjust the belt system so that the webbing between points A and B is at any length that is 5 inches or more shorter than the maximum length of the webbing. (S7.1.1.5(c)(3))
- ☐ 12. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4)) Measured force application angle \_\_ degrees. (Spec. 5-15 degrees)
- ☐ 13. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4)) Measured distance between A and B \_\_\_\_ inches.

FMVSS 208 Lap Belt Lockability, Cont'd.

NHTSA No.: C35106

Technician: Ron Stoner

Date: 04/14/2003

Designated Seating Position: Middle Front

- ☐ 14. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

Record onset rate \_\_\_ lbs/sec (spec. 10 ~50 lb/sec)

The measured distance between A and B is \_\_\_ inches (S7.1.1.5(c)(6))

- ☐ 15. Subtract the measurement in 13 from the measurement in 14. Is the difference 2 inches or less? (S7.1.1.5 (c)(7))

14-13= \_\_\_ inches

☐ Yes-Pass

☐ No-Fail

- ☐ 16. Subtract the measurement in 14 from the measurement in 10. Is the difference 3 inches or more? (S7.1.1.5(c)(8))

10-14= 35.1 inches.

☐ Yes-Pass

☐ No-Fail

**FMVSS 208 Seat Belt Comfort And Convenience Test**  
**Belt Contact Force (S7.4.3)**

Test Vehicle NHTSA No.: C35106  
Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck  
Designated Seating Position Tested: Left Front  
Date of Comfort and Convenience Check: 04/11/2003  
Technician Performing Check: Scott Bazzle  
GVWR: 4250 pounds

Test all Type 2 seat belts other than those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

1. Does the vehicle incorporate a webbing tension-relieving device?

☐ Yes-go to latchplate access  
☒ No-continue with this check sheet

2. Adjustable seats are in the adjustment position midway between the forward most and rearmost positions. If an adjustment position does not exist midway between the forward most and rearmost positions, the next closest adjustment position to the rear of the midpoint is used. (S8.1.2)

☒ Check  
☐ N/A

3. If separately adjustable in a vertical direction, the seats are at the lowest position.

☐ Check  
☒ N/A

4. Place adjustable seat backs in the manufacturer's nominal design riding position in the manner specified by the manufacturer.

☐ Check  
☒ N/A

5. Place any adjustable anchorages at the manufacturer's nominal design position for a 50<sup>th</sup> percentile adult male (50M) occupant. This information will be furnished by the COTR.

☒ Check  
☐ N/A

**FMVSS 208 Seat Belt Comfort And Convenience Test Summary, Cont'd.**

**Belt Contact Force (S7.4.3)**

6. Place each adjustable head restraint in its highest adjustment position.

☐ Check  
☒ N/A

7. Adjustable lumbar supports are positioned so that the lumbar support is in its lowest adjustment position. (S8.1.3)

☐ Check  
☒ N/A

8. Position the test dummy according to the dummy position placement instructions in Appendix B of the Laboratory Test Procedure.

☒ Check

9. Fasten the seat belt latch. Pull either 12 inches of belt webbing or the maximum available amount of belt webbing, whichever is less, from the retractor and then release it, allowing the belt webbing to return to the dummy's chest. Locate the point where the centerline of the upper torso belt webbing crosses the midsagittal line on the dummy's chest. At that point pull the belt webbing out 3 inches from the dummy's chest and release until it is within one inch from the dummy's chest. (S10.8) Measure the contact force exerted by the belt webbing on the dummy's chest. Contact the CUTR if the contact force exceeds 0.7 pounds. Contact force is 0.6 pounds.

☒ 0.0 to 0.7 pounds - Pass  
☐ greater than 0.7 pounds - FAIL\*

\* If the seat belts are voluntarily installed by the manufacturer they do not have to comply.

- ☒ 0.0 to 0.7 pounds - Pass  
☐ greater than 0.7 pounds - FAIL\*

\* If the seat belts are voluntarily installed by the manufacturer they do not have to comply.

**FMVSS 208 Seat Belt Comfort And Convenience Test Summary, Cont'd.**  
**Latchplate Access (S7.4.4)**

Test Vehicle NHTSA No.: C35106  
Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck  
Designated Seating Position Tested: Left Front  
Date of Comfort and Convenience Check: 04/14/2003  
Technician Performing Check: Ron Stoner  
GVWR: 4250 pounds

Test all front outboard seat belts other than those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

1. Position the seat in its forward most adjustment position. ☒ Check
  
2. Position the test dummy using the procedures in Appendix B of the Laboratory Test Procedure. (Some modifications to the positioning procedure may need to be made because the seat is in its forward most position.) ☒ Check
  
3. Position the adjustable seat belt anchorage in the manufacturer's nominal design position for a 50<sup>th</sup> percentile adult male occupant. ☒ Check
  
4. Attach the inboard and outboard reach string following the instructions on Figure 1C of the Laboratory Test Procedure. ☒ Check
  
5. Place the latch plate in the stowed position. ☒ Check
  
6. Extend each line backward and outboard to generate arcs of the reach envelope of the test dummy's arms. Is the latchplate within the reach envelope?  
☒ Yes-Pass; ☐ No-Fail
  
7. Using the clearance test block, specified in Figure 2C of the Laboratory Test Procedure, determine if there is sufficient clearance between the vehicle seat and the side of vehicle to allow the test block to move unhindered to the latchplate or buckle.  
☒ Yes-Pass; ☐ No-Fail

**Seat Belt Guides And Hardware (S7.4.6)**

Test Vehicle NHTSA No.: C35106

Vehicle Model Year/Make/Model/Body Style: 2003/Toyota/Tacoma/Truck

Designated Seating Position Tested: Left Front

Date of Comfort and Convenience Check: 04/14/2003

Technician Performing Check: Ron Stoner

GVWR: 4250 pounds

Test seat belts except those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

The requirements for accessibility **DO NOT APPLY** to:

- A. Seats whose seat cushions are movable so that the seat back serves a function other than seating (S7.4.6.1(b)).
- B. Seats which are removable.
- C. Seats that are movable so that the space formerly occupied by the seat can be used for a secondary function.

If the seats in this vehicle are different than the criteria above, determine the following:

- 1. Is the webbing designed to pass through the seat cushion or between the seat cushion and seat back?  
☒ Yes: go to 2.  
☐ No: this form is complete.
- 2. Does one of the following three parts, the seat belt latchplate, the buckle, or the seat belt webbing, stay on top of or above the seat cushion under normal conditions (i.e., conditions other than when belt hardware is intentionally pushed behind the seat by a vehicle occupant)?  
☒ Yes-Pass; ☐ No-Fail
- 3. Are the remaining two seat belt parts accessible under normal conditions?  
☒ Yes-Pass; ☐ No-Fail

**FMVSS 208 Seat Belt Comfort And Convenience Test Summary, Cont'd.**

**Seat Belt Guides And Hardware (S7.4.6)**

4. The buckle and latchplate do not pass through the guides or conduits provided and fall behind the seat when the following events occur in order:

(A) The belt is completely retracted or, if the belt is nonretractable, the belt is unlatched.

☒ Check

(B) The seat is moved to any position to which it is designed to be adjusted.

☒ Check

(C) The seat back, if foldable, is folded forward as far as possible and then moved backward into position.

☒ Check

☒ Yes-Pass;

☐ No-Fail

5. Is the inboard receptacle end of the seat belt assembly, installed in the outboard designated seating position, accessible with the center arm rest in any position to which it can be adjusted (without moving the armrest)?

☐ Yes-Pass;

☐ No-Fail

N/A, no armrest

Appendix C

**Manufacturer's Vehicle Information**

## Armrest

To use the armrest, do this.

To lower: Pull the lock release strap and down the armrest.

To raise: Push down the lock release strap and up the armrest.

### NOTICE

To prevent damage to the armrest, avoid putting heavy loads on it.

## Seat belts— —Seat belt precautions

Toyota strongly urges that the driver and passengers in the vehicle be properly restrained at all times with the seat belts provided. Failure to do so could increase the chance of injury and/or the severity of injury in accidents.

The seat belts provided for your vehicle are designed for people of adult size, large enough to properly wear them.

**Child.** Use a child restraint system appropriate for the child until the child becomes large enough to properly wear the vehicle's seat belts. See "Child restraint" for details.

### REGULAR CAB MODELS—

If a child is too large for a child restraint system, the child should sit in the seat and must be restrained using the vehicle's seat belt.

### XTRA-CAB and DOUBLE CAB MODELS—

If a child is too large for a child restraint system, the child should sit in the rear seat and must be restrained using the vehicle's seat belt. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.

If a child must sit in the front seat, the seat belts should be worn properly. If an accident occurs and the seat belts are not worn properly, the force of the rapid inflation of the airbag may cause death or serious injury to the child.

Do not allow the child to stand up or kneel on either rear or front seats. An unrestrained child could suffer serious injury or death during emergency braking or a collision. Also, do not let the child sit on your lap. It does not provide sufficient restraint.

**Small-framed person or youth in a 3-point type seat belt.** On models with a bench seat, have a small-framed person or youth sit slightly closer to the center of the vehicle (so the shoulder belt does not cross over the neck). On models with separate seats, move the seat fully backward.

**Pregnant woman.** Toyota recommends the use of a seat belt. Ask your doctor for specific recommendations. The lap belt should be worn securely and as low as possible over the hips and not on the waist.

**Injured person.** Toyota recommends the use of a seat belt. Depending on the injury, first check with your doctor for specific recommendations.

### ⚠ CAUTION

persons should ride in their seats properly wearing their seat belts whenever the vehicle is moving. Otherwise, they are much more likely to suffer serious bodily injury or death in the event of sudden braking or a collision.

When using the seat belts, observe the following:

- Use the belt for only one person at a time. Do not use a single belt for two or more people—even children.
- Avoid reclining the seatbacks too much. The seat belts provide maximum protection when the seatbacks are in the upright position. (Refer to the seat adjustment instructions.)
- Be careful not to damage the belt webbing or hardware. Take care that they do not get caught or pinched in the seat or slide doors.

## —Front and rear outside seat belts

Adjust the seat as needed (front seats only) and sit up straight and well back in the seat. To fasten your belt, pull it out of the retractor and insert the tab into the buckle.

You will hear a click when the tab locks into the buckle.

The seat belt length automatically adjusts to your size and the seat position.

The retractor will lock the belt during a sudden stop or on impact. It also may lock if you lean forward too quickly. A slow, easy motion will allow the belt to extend, and you can move around freely.

- Inspect the belt system periodically. Check for cuts, fraying, and loose parts. Damaged parts should be replaced. Do not disassemble or modify the system.
- Keep the belts clean and dry. If they need cleaning, use a mild soap solution or lukewarm water. Never use bleach, dye, or abrasive cleaners—they may severely weaken the belts. (See "Cleaning the interior" in Section 5.)
- Replace the belt assembly (including bolts) if it has been used in a severe impact. The entire assembly should be replaced even if damage is not obvious.

If the seat belt cannot be pulled out of the retractor, firmly pull the belt and release it. You will then be able to smoothly pull the belt out of the retractor.

When a passenger's shoulder belt is completely extended and is then retracted even slightly, the belt is locked in that position and cannot be extended. This feature is used to hold the child restraint system securely. (For details, see "Child restraint" in this section.) To free the belt again, fully retract the belt and then pull the belt out once more.

# CAUTION

Always make sure the shoulder belt is positioned across the center of your shoulder. The belt should be kept away from your neck, but not falling off your shoulder. Failure to do so could reduce the amount of protection in an accident and cause severe injuries in a collision.

# CAUTION

- After inserting the tab, make sure the tab and buckle are locked and that the belt is not twisted.
- Do not insert coins, clips, etc. in the buckle as this may prevent you from properly latching the tab and buckle.
- If the seat belt does not function normally, immediately contact your Toyota dealer. Do not use the seat until the seat belt is fixed. It cannot protect an adult occupant or your child from injury.

Seat belts with an adjustable shoulder anchor—

Adjust the shoulder anchor position to your size.

To raise: Slide the anchor up.

To lower: Push in the lock release button and slide the anchor down.

After adjustment, make sure the anchor is locked in position.

#### Adjust the position of the lap and shoulder belts.

Position the lap belt as low as possible on your hips— not on your waist, then adjust it to a snug fit by pulling the shoulder portion upward through the latch plate.

**CAUTION**

- Both high-positioned lap belts and loose-fitting belts could cause serious injuries due to sliding under the lap belt during a collision or other unintended result. Keep the lap belt positioned as low on hips as possible.
- For your safety, do not place the shoulder belt under your arm.

To release the belt, press the buckle-release button and allow the belt to retract.

If the belt does not retract smoothly, pull it out and check for kinks or twists. Then make sure it remains untwisted as it retracts.

# —Front and rear center seat belt

h13211

Sit up straight and well back in the seat. To fasten your belt, insert the tab into the buckle.

You will hear a click when the tab locks into the buckle.

If the belt is not long enough for you, hold the tab at a right angle to the belt and pull on the tab.

**CAUTION**

- After inserting the tab, make sure the tab and buckle are locked and that the belt is not twisted.
- Do not insert coins, clips, etc. in the buckle as this may prevent you from properly latching the tab and buckle.
- If the seat belt does not function normally, immediately contact your Toyota dealer. Do not use the seat until the seat belt is fixed. It cannot protect an adult occupant or your child from injury.

h13013

Remove excess length of the belt and adjust the belt position.

To shorten the belt, pull the free end of the belt.

Position the lap belt as low as possible on your hips—not on your waist, then adjust it to a snug fit.

**CAUTION**

Both high-positioned and loose-fitting lap belts could cause serious injuries due to sliding under the lap belt during a collision or other unintended result. Keep the lap belt positioned as low on hips as possible.

**—Stowing the rear seat  
buckles (xtra-cab models)**

To release the belt, press the buckle-release button.

The buckles can be fixed when not in use.

When taking out the buckle from the holder, pull on the belt webbing to remove the buckle from the lower portion.

**—Seat belt extender**

If your seat belts cannot be fastened securely because they are not long enough, a personalized seat belt extender is available from your Toyota dealer free of charge.

Please contact your local Toyota dealer so that the dealer can order the proper required length for the extender. Bring the heaviest coat you expect to wear for proper measurement and selection of length. Additional ordering information is available at your Toyota dealer.

**⚠ CAUTION**

When using the seat belt extender, observe the following precautions. Failure to follow these instructions could reduce the effectiveness of the seat belt restraint system in case of vehicle accident, increasing the chance of personal injury.

- Never use the seat belt extender if you can fasten the seat belt without it.

● Remember that the extender provided for you may not be safe when used on a different vehicle, for another person, or at a different seating position than the one originally intended.

To connect the extender to the seat belt, insert the tab into the seat belt buckle so that the "PRESS" signs on the buckle-release buttons of the extender and the seat belt are both facing outward as shown.

You will hear a click when the tab locks into the buckle.

When releasing the seat belt, press on the buckle-release button on the extender, not on the seat belt. This helps prevent damage to the vehicle interior and extender itself.

When not in use, remove the extender and store in the vehicle for future use.

## CAUTION

- After inserting the tab, make sure the tab and buckle are locked and that the seat belt extender is not twisted.
- Do not insert coins, clips, etc. in the buckle as this may prevent you from properly latching the tab and buckle.
- If the seat belt does not function normally, immediately contact your Toyota dealer. Do not use the seat until the seat belt is fixed. It cannot protect an adult occupant or your child from injury.

## —Front seat belt pretensioners

The driver and front passenger's seat belt pretensioners are designed to be activated in response to a severe frontal impact.

When the airbag sensor detects the shock of a severe frontal impact, the front seat belts are quickly drawn back in by the retractors so that the belts snugly restrain the front seat occupants.

The front seat belt pretensioners are activated even with no passenger in the front seat.

This indicator comes on when the ignition key is turned to the "ON" position. It goes off after about 6 seconds. This means the front seat belt pretensioners are operating properly.

This warning light system monitors the airbag sensor assembly, front airbag sensors, front seat belt pretensioner assemblies, inflators, warning light, interconnecting wiring and power sources. (For details, see "Service reminder indicators and warning buzzers" in Section 1-5.)

The front seat belt pretensioner system mainly consists of the following components and their locations are shown in the illustration.

1. Front airbag sensors
2. SRS warning light
3. Front seat belt pretensioner assemblies
4. Airbag sensor assembly

The front seat belt pretensioners are controlled by the airbag sensor assembly. The airbag sensor assembly consists of a sensing sensor and airbag sensor.

When the front seat belt pretensioners are activated, an operating noise may be heard and a small amount of smoke-like gas may be released. This gas is harmless and does not indicate that a fire is occurring.

Once the front seat belt pretensioners have been activated, the seat belt retractors remain locked.

#### ⚠ CAUTION

Do not modify, remove, strike or open the front seat belt pretensioner assemblies, airbag sensor or surrounding area or wiring. Doing any of these may cause sudden operation of the front seat belt pretensioners or disable the system, which could result in death or serious injury.

Failure to follow these instructions can result in death or serious injuries. Consult your Toyota dealer about any repairs and modifications.

#### NOTICE

*Do not perform any of the following changes without consulting your Toyota dealer. Such changes can interfere with proper operation of the front seat belt pretensioners in some cases.*

- ◆ Installation of electronic devices such as a mobile two-way radio, cassette tape player or compact disc player
- ◆ Repairs on or near the front seat belt pretensioner assemblies
- ◆ Modification of the suspension system
- ◆ Modification of the front end structure
- ◆ Attachment of a grille guard (bull bar, kangaroo bar, etc.), snowplow, winches or any other equipment to the front end
- ◆ Repairs made on or near the front fenders, front end structure or cross member

This front seat belt pretensioner system has a service reminder indicator to inform the driver of operating problems. If any of the following conditions occurs, this indicates a malfunction of the airbags or pretensioners. Contact your Toyota dealer as soon as possible to service the vehicle.

- ◆ The light does not come on when the ignition key is turned to the "ON" position, or the light remains on.
- ◆ The light comes on or flashes while driving.
- ◆ If either front seat belt does not retract or can not be pulled out due to a malfunction or activation of the relevant front seat belt pretensioner.

**SRS driver airbag and front passenger airbag  
(vehicles with passenger airbag manual on-off switch)**

In response to a severe frontal impact, the SRS airbags work together with the seat belts to help prevent or reduce injury by inflating. The SRS airbags help to reduce injuries mainly to the driver's or front passenger's head or chest directly hitting the steering wheel or dashboard. When the passenger airbag manual on-off switch is in the "ON" position, the front passenger airbag is activated even with no passenger in the front seat.

Be sure to wear your seat belt properly. Your vehicle is equipped with a crash sensing and diagnostic module, which will record the use of the seat belt restraint system by the driver when the SRS airbags are inflated.

The SRS (Supplemental Restraint System) airbags are designed to provide further protection for occupants in the following seats in addition to the primary safety protection provided by the seat belts.

- Models with separate front seats—The SRS airbags are designed to protect the driver and front passenger.
- Models with bench front seats—The SRS airbags are designed to protect the driver and right-front passenger. They are not designed to protect occupant in the center position.

In the following cases, contact your Toyota dealer as soon as possible:

- The front part of the vehicle (shaded in the illustration) was involved in an accident that was not severe enough to cause the front seat belt pretensioners to operate.
- Either front seat belt pretensioner assembly or surrounding area is scratched, cracked, or otherwise damaged.

# **CAUTION**

The driver or front passenger who is too close to the steering wheel or dashboard during airbag deployment can be killed or seriously injured. Toyota strongly recommends that:

- The driver sit as far back as possible from the steering wheel while still maintaining control of the vehicle.
- The front passenger sit as far back as possible from the dashboard.
- All vehicle occupants be properly restrained using the available seat belts.

The passenger airbag system is equipped with a manual on-off switch and indicator light. Turning the passenger airbag manual on-off switch clockwise to the "ON" position makes the front passenger airbag system operational. Turning the passenger airbag manual on-off switch counterclockwise to the "OFF" position disables the front passenger airbag system. The indicator light on the passenger airbag manual on-off switch will come on when the front passenger airbag system has been disabled.

See "Passenger airbag manual on-off switch" in this section for detail.

# **CAUTION**

- Make sure that the indicator light is off.
- Do not turn off the passenger airbag manual on-off switch except when a member of a passenger risk group identified in TABLE 1 is occupying the right front passenger seating position.
- When the passenger airbag manual on-off switch is turned off, the front passenger airbag will not inflate in a collision and turning off the front passenger airbag can reduce the occupant protection which your vehicle safety systems can provide to you in certain accidents and increase the likelihood of serious personal injuries.

TABLE 1: A PASSENGER RISK GROUP	
<b>Infant.</b> An infant (less than 1 year old) who must ride in the front seat because: <ul style="list-style-type: none"> <li>• Vehicle has no rear seat;</li> <li>• Vehicle has a rear seat too small to accommodate a rear-facing infant seat; or</li> <li>• The infant has a medical condition which, according to the infant's physician, makes it necessary for the infant to ride in the front seat so that the driver can constantly monitor the child's condition.</li> </ul>	
<b>Child age 1 to 12.</b> A child age 1 to 12 must ride in the front seat because: <ul style="list-style-type: none"> <li>• Vehicle has no rear seat;</li> <li>• Although children ages 1 to 12 ride in the rear seat(s) whenever possible, children ages 1 to 12 sometimes must ride in the front because no space is available in the rear seat(s) of vehicle; or</li> <li>• The child has a medical condition which, according to the child's physician, makes it necessary for the child to ride in the front seat so that the driver can constantly monitor the child's condition.</li> </ul>	
<b>Medical condition.</b> A passenger has a medical condition which according to his or her physician: <ul style="list-style-type: none"> <li>• Causes the passenger airbag to pose a special risk for the passenger; and</li> <li>• Makes the potential harm from the passenger airbag in a crash greater than the potential harm from turning off the airbag and allowing the passenger, even if belted, to hit the dashboard, or windshield in a crash.</li> </ul>	

For more detailed information concerning the passenger risk group, please contact NHTSA at 1-800-424-9393 or Transport Canada at 1-800-333-0371.

h13024

This indicator comes on when the ignition key is turned to the "ON" position. It goes off after about 6 seconds. This means the SRS airbags are operating properly.

This warning light system monitors the airbag sensor assembly, front airbag sensors, front seat belt pretensioner assemblies, inflators, warning light, interconnecting wiring and power sources. (For details, see "Service reminder indicators and warning buzzers" in Section 1-5.)

The SRS airbag system is designed to activate in response to a severe frontal impact within the shaded area between the arrows in the illustration.

The SRS airbags will deploy if the severity of the impact is above the designed threshold level, comparable to an approximate 25 km/h (15 mph) collision when impacting straight into a fixed barrier that does not move or deform.

If the severity of the impact is below the above threshold level, the SRS airbags may not deploy.

However, this threshold velocity will be considerably higher if the vehicle strikes an object, such as a parked vehicle or sign pole, which can move or deform on impact, or if it is involved in an underide collision (e.g. a collision in which the nose of the vehicle "underrides", or goes under, the bed of a truck, etc.).

It is possible that in some collisions at the lower zone of airbag sensor detection and activation the SRS airbags and seat belt pretensioners will not operate all together.

For the safety of all occupants, always wear your seat belts properly.

The SRS airbags are not designed to inflate if the vehicle is involved in a side or rear collision, if it rolls over, or if it is involved in a low-speed frontal collision.

The SRS airbags may deploy if a serious impact occurs to the underside of your vehicle. Some examples are shown in the illustration.

The SRS airbag system consists mainly of the following components, and their locations are shown in the illustration.

1. Front airbag sensors
2. Airbag module for driver (airbag and inflator)
3. Passenger airbag manual on-off switch
4. Airbag module for front passenger (airbag and inflator)
5. Airbag sensor assembly
6. SRS warning light

The airbag sensor assembly consists of a seating sensor and airbag sensor.

In a severe frontal impact, the sensors detect deceleration and the system triggers the airbag inflators. Then a chemical reaction in the inflators quickly fills the airbags with non-toxic gas to help restrain the forward motion of the occupants.

When the airbags inflate, they produce a fairly loud noise and release some smoke and residue along with non-toxic gas. This does not indicate a fire. This gas is normally harmless; however, for those who have delicate skin, it may cause a minor skin irritation. Be sure to wash off any residue as soon as possible to prevent any potential skin irritation.

Deployment of the airbags happens in a fraction of a second, so the airbags must inflate with considerable force. While the system is designed to reduce serious injuries, it may also cause minor burns or abrasions and swelling.

Parts of the airbag module (steering wheel hub, dashboard) may be hot for several minutes, but the airbags themselves will not be hot. The airbags are designed to inflate only once.

A crash severe enough to inflate the airbags may break the windshield as the vehicle buckles. In vehicles with a passenger airbag the windshield may also be damaged by absorbing some of the force of the inflating airbag.

# CAUTION

• The SRS airbag system is designed only as a supplement to the primary protection of the driver side and front passenger side seat belt systems. The front seat occupants can be killed or seriously injured by the inflating airbags if they do not wear the available seat belts properly. During sudden braking just before a collision, an unrestrained driver or front passenger can move forward into direct contact with or close proximity to the airbag which may then deploy during the collision. To ensure maximum protection in an accident, the driver and all passengers in the vehicle must wear their seat belts properly. Wearing a seat belt properly during an accident reduces the chances of death or serious injury or being thrown out of the vehicle. For instructions and precautions concerning the seat belt system, see "Seat belts" in this section.

• Improperly seated and/or restrained infants and children can be killed or seriously injured by the deploying airbags. An infant or child who is too small to use a seat belt should be properly secured using a child restraint system. As to Xtracab models, Toyota recommends that all infants and children be placed in the rear seat of the vehicle and properly restrained. The rear seat is the safest for infants and children. For instructions concerning the installation of a child restraint system, see "Child restraint" in this section.

**CAUTION**

A member of a passenger risk group should never sit or be occupied in the right front passenger seat with the airbag manual on-off switch in the "ON" position. (For details, see "SRS driver and front passenger airbags" in this section.)

• A forward-facing child restraint system which belongs to a passenger risk group should never be installed on the right front seat with the passenger airbag manual on-off switch in the "ON" position, because the force of the deploying airbag could cause death or serious injury to the child in forward seating position. For instructions concerning the installation of a child restraint system, see "Child restraint" in this section.

**CAUTION**

• Never install a rear-facing child restraint system on the right front seat with the passenger airbag manual on-off switch in the "ON" position. In the event of an accident, the force of the rapid inflation of the front passenger airbag can cause death or serious injury to the child.

● Do not sit on the edge of the seat or lean over the dashboard when the vehicle is in use, since the airbags inflate with considerable speed and force. Otherwise you may be killed or seriously injured. Sit up straight and well back in the seat, and always use your seat belt properly.

● Do not allow a child to stand up or to kneel on the front passenger seat, since the airbag inflates with considerable speed and force. Otherwise, the child may be killed or seriously injured.

● Do not hold a child on your lap or in your arms. Use a child restraint system in the rear seat. For instructions concerning the installation of a child restraint system, see "Child restraint" in this section.

● Do not put objects or your pets on or in front of the dashboard or steering wheel pad that houses the airbag system. They might restrict inflation or cause death or serious injury as they are protected rearward by the force of the deploying airbags. Likewise, the driver and front passenger should not hold objects in their arms or on their knees.

◆ Do not modify or remove any wiring. Do not modify, remove, strike or open any components such as the steering wheel pad, steering wheel, column cover, front passenger airbag cover, front passenger airbag or airbag sensor assembly. Doing so may cause sudden SRS airbag inflation or disable the system, which could result in death or serious injury.

Failure to follow these instructions can result in death or serious injury. Consult your Toyota dealer about any repairs and modifications.

#### NOTICE

Do not perform any of the following changes without consulting your Toyota dealer. Such changes can interfere with proper operation of the SRS airbag system in some cases.

- ◆ Installation of electronic devices such as a mobile two-way radio, cassette tape player or compact disc player
- ◆ Modification of the suspension system
- ◆ Modification of the front end structure
- ◆ Attachment of a grille guard (bull bar, kangaroo bar, etc.), snowplow, winches or any other equipment to the front end
- ◆ Repairs made on or near the front fenders, front end structure, controls, steering column, steering wheel or dashboard near the front passenger airbag

21824

This SRS airbag system has a service reminder indicator to inform the driver of operating problems. If either of the following conditions occurs, this indicates a malfunction of the airbags. Contact your Toyota dealer as soon as possible to service the vehicle.

- ◆ The light does not come on when the ignition key is turned to the "ON" position, or the light remains on.
- ◆ The light comes on while driving.

**SRS driver airbag and front passenger airbag (vehicles without passenger airbag manual on-off switch)**

The SRS (Supplemental Restraint System) airbags are designed to provide further protection for the driver and front passenger in addition to the primary safety protection provided by the seat belts.

In response to a severe frontal impact, the SRS airbags work together with the seat belts to help reduce injury by inflating. The SRS airbags help to reduce injuries mainly to the driver's or front passenger's head or chest caused by directly hitting the steering wheel or dashboard. The front passenger airbag is activated even with no passenger in the front seat. Be sure to wear your seat belt properly.

**NOTICE**  
*Do not disconnect the battery cables before contacting your Toyota dealer.*

In the following cases, contact your Toyota dealer as soon as possible:

- The SRS front airbags have been inflated.
- The front of the vehicle (shaded in the illustration) was involved in an accident that was not severe enough to cause the SRS airbags to inflate.
- The pad section of the steering wheel or front passenger airbag cover (shaded in the illustration) is scratched, cracked, or otherwise damaged.

Your vehicle is equipped with a crash sensing and diagnostic module, which will record the use of the seat belt restraint system by the driver when the SRS airbags are inflated.

# **CAUTION**

The driver or front passenger who is too close to the steering wheel or dashboard during airbag deployment can be killed or seriously injured. Toyota strongly recommends that:

- The driver sit as far back as possible from the steering wheel while still maintaining control of the vehicle.
- The front passenger sit as far back as possible from the dashboard.
- All vehicle occupants be properly restrained using the available seat belts.

This indicator comes on when the ignition key is turned to the "ON" position. It goes off after about 6 seconds. This means the SRS airbags are operating properly.

This warning light system monitors the airbag sensor assembly, front airbag sensors, front seat belt pretensioner assemblies, inflators, warning light, interconnecting wiring and power sources. (For details, see "Service reminder indicators and warning buzzers" in Section 1-5.)

The SRS airbag system is designed to activate in response to a severe frontal impact within the shaded area between the arrows in the illustration.

The SRS airbags will deploy if the severity of the impact is above the designed threshold level, comparable to an approximate 25 km/h (15 mph) collision when impacting straight into a fixed barrier that does not move or deform.

If the severity of the impact is below the above threshold level, the SRS airbags may not deploy.

However, this threshold velocity will be considerably higher if the vehicle strikes an object, such as a parked vehicle or sign pole, which can move or deform on impact, or if it is involved in an underide collision (e.g. a collision in which the nose of the vehicle "underrides", or goes under, the bed of a truck, etc.).

It is possible that in some collisions at the lower zone of airbag sensor detection and activation the SRS airbags and seat belt pretensioners will not operate all together.

For the safety of all occupants, always wear your seat belts properly.

The SRS airbags are not designed to inflate if the vehicle is involved in a side or rear collision, if it rolls over, or if it is involved in a low-speed frontal collision.

The SRS airbags may deploy if a serious impact occurs to the underside of your vehicle. Some examples are shown in the illustration.

The SRS airbag system consists mainly of the following components, and their locations are shown in the illustration.

1. Front airbag sensors
2. Airbag module for driver (airbag and inflator)
3. Airbag module for front passenger (airbag and inflator)
4. Airbag sensor assembly
5. SRS warning light

The airbag sensor assembly consists of a safing sensor and airbag sensor.

In a severe frontal impact, the sensors detect deceleration and the system triggers the airbag inflators. Then a chemical reaction in the inflators quickly fills the airbags with non-toxic gas to help restrain the forward motion of the occupants.

When the airbags inflate, they produce a fairly loud noise and release some smoke and residue along with non-toxic gas. This does not indicate a fire. This gas is normally harmless; however, for those who have delicate skin, it may cause a minor skin irritation. Be sure to wash off any residue as soon as possible to prevent any potential skin irritation.

Deployment of the airbags happens in a fraction of a second, so the airbags must inflate with considerable force. While the system is designed to reduce serious injuries, it may also cause minor burns or abrasions and swelling.

Parts of the airbag module (steering wheel hub, dashboard) may be hot for several minutes, but the airbags themselves will not be hot. The airbags are designed to inflate only once.

A crash severe enough to inflate the airbags may break the windshield as the vehicle buckles. In vehicles with a passenger airbag the windshield may also be damaged by absorbing some of the force of the inflating airbag.

**CAUTION**

• The SRS airbag system is designed only as a supplement to the primary protection of the driver side and front passenger side seat belt systems. The front seat occupants can be killed or seriously injured by the inflating airbags if they do not wear the available seat belts properly. During sudden braking just before a collision, an unrestrained driver or front passenger can move forward into direct contact with or close proximity to the airbag which may then deploy during the collision. To ensure maximum protection in an accident, the driver and all passengers in the vehicle must wear their seat belts properly. Wearing a seat belt properly during an accident reduces the chances of death or serious injury or being thrown out of the vehicle. For instructions and precautions concerning the seat belt system, see "Seat belts" in this section.

• Improperly seated and/or restrained infants and children can be killed or seriously injured by the deploying airbags. An infant or child who is too small to use a seat belt should be properly secured using a child restraint system. Toyota strongly recommends that all infants and children be placed in the rear seat of the vehicle and properly restrained. The rear seat is the safest for infants and children. For instructions concerning the installation of a child restraint system, see "Child restraint" in this section.

• Never install a rear-facing child restraint system on the front passenger seat because the force of the rapid inflation of the front passenger airbag can cause death or serious injury to the child.

• A forward-facing child restraint system should be allowed to be installed on the front passenger seat only when it is unavoidable. Always move the seat as far back as possible, because the force of the deploying front passenger airbag could cause death or serious injury to the child. For instructions concerning the installation of a child restraint system, see "Child restraint" in this section.

• Do not sit on the edge of the seat or lean over the dashboard when the vehicle is in use, since the airbags inflate with considerable speed and force. Otherwise you may be killed or seriously injured. Sit up straight and well back in the seat, and always use your seat belt properly.

• Do not allow a child to stand up or to kneel on the front passenger seat, since the airbag inflates with considerable speed and force. Otherwise, the child may be killed or seriously injured.

• Do not hold a child on your lap or in your arms. Use a child restraint system in the rear seat. For instructions concerning the installation of a child restraint system, see "Child restraint" in this section.

• Do not put objects or your pete on or in front of the dashboard or steering wheel pad that houses the airbag system. They might restrict inflation or cause death or serious injury as they are projected rearward by the force of the deploying airbag. Likewise, the driver and front passenger should not hold things in their arms or on their knees.

• Do not modify or remove any wiring. Do not modify, remove, strike or open any components such as the steering wheel pad, steering wheel, column cover, front passenger airbag cover, front passenger airbag or airbag sensor assembly. Doing so may cause sudden SRS airbag inflation or disable the system, which could result in death or serious injury.

Failure to follow these instructions can result in death or serious injury.

#### NOTICE

Do not perform any of the following changes without consulting your Toyota dealer. Such changes can interfere with proper operation of the SRS airbag system in some cases.

- ◆ Installation of electronic devices such as a mobile two-way radio, cassette tape player or compact disc player
- ◆ Modification of the suspension system
- ◆ Modification of the front end structure
- ◆ Attachment of a grille guard (bull bar, kangaroo bar, etc.), snowplow, winches or any other equipment to the front end
- ◆ Repairs made on or near the front fenders, front end structure, console, steering column, steering wheel or dashboard near the front passenger airbag

MS024

This SRS airbag system has a service reminder indicator to inform the driver of operating problems. If either of the following conditions occurs, this indicates a malfunction of the airbags. Contact your Toyota dealer as soon as possible to service the vehicle.

- The light does not come on when the ignition key is turned to the "ON" position, or the light remains on.
- The light comes on while driving.

In the following cases, contact your Toyota dealer as soon as possible:

- The SRS front airbags have been inflated.
- The front of the vehicle (shaded in the illustration) was involved in an accident that was not severe enough to cause the SRS airbags to inflate.
- The pad section of the steering wheel or front passenger airbag cover (shaded in the illustration) is scratched, cracked, or otherwise damaged.

# **NOTICE**

**Do not disconnect the battery cables before contacting your Toyota dealer.**

### Passenger airbag manual on-off switch (on some models)

This on-off switch is designed to disable the front passenger airbag in order to allow usage, if necessary, of a member of a passenger risk group identified in TABLE 1 is occupying the right front passenger seating position. (For details, see "SRS driver airbag and front passenger airbag" in this section.)

#### Operate on-off switch as follows:

Insert key into the keyhole and turn it. To turn front passenger airbag on: Turn the key clockwise to the "ON" position. To turn front passenger airbag off: Turn the key counterclockwise to the "OFF" position.

The indicator light comes on when the front passenger airbag system is off.

<b>⚠ CAUTION</b>
<ul style="list-style-type: none"> <li>• Make sure that the indicator light is off.</li> <li>• Do not turn off the passenger airbag manual on-off switch except when a member of a passenger risk group identified in TABLE 1 is occupying the right front passenger seating position.</li> <li>• When the passenger airbag manual on-off switch is turned off, the front passenger airbag will not inflate in a collision and turning off the front passenger airbag can reduce the occupant protection which your vehicle safety systems can provide to you in certain accidents and increase the likelihood of serious personal injuries.</li> </ul> <p>For details, see "SRS driver and front passenger airbags" in this section.</p>

### Child restraint— —Child restraint precautions

Toyota strongly urges the use of child restraint systems for children small enough to use them.

The laws of all 50 states in the U.S.A. and Canada now require the use of a child restraint system.

Your vehicle conforms to SAEJ1819.

If a child is too large for a child restraint system, the child should sit in the seat and must be restrained using the vehicle's seat belt. See "Seat belts" for details.

#### ⚠ CAUTION

- For effective protection in automobile accidents and sudden stops, a child must be properly restrained, using a seat belt or child restraint system depending on the age and size of the child. Holding a child in your arms is not a substitute for a child restraint system. In an accident, the child can be crushed against the windshield, or between you and the vehicle's interior.

Vehicles with passenger airbag manual on-off switch—

• **REGULAR CAB MODELS—**

Toyota strongly urges use of a proper child restraint system which conforms to the size of the child.

**XTRA-CAB MODELS—**

Toyota strongly urges use of a proper child restraint system which conforms to the size of the child, installed on the rear seat. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.

- Never put infant or child age 1 to 12 in a passenger risk group on the right front seat with the passenger airbag manual on-off switch in the "ON" position. In the event of an accident, the force of the rapid inflation of the passenger airbag can cause death or serious injury to the child.

If you must put infant or child age 1 to 12 in a passenger risk group on the right front seat, make sure the passenger airbag manual on-off switch is in the "OFF" position and that the indicator light is on. (For details, see "SRS driver airbag and front passenger airbag" in this section.)

- Make sure that you have complied with all installation instructions provided by the child restraint manufacturer and that the system is properly secured.

Vehicles without passenger airbag manual on-off switch—

- Toyota strongly urges use of a proper child restraint system which conforms to the size of the child, installed on the rear seat. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.

- Never install a rear-facing child restraint system on the front seat. In the event of an accident, the force of the rapid inflation of the airbag can cause death or serious injury if a rear-facing child restraint system is installed on the front seat.

- Unless it is unavoidable, do not install a forward-facing child restraint system on the front seat.

- A forward-facing child restraint system should be allowed to be installed on the front passenger seat only when it is unavoidable. Always move the seat as far back as possible, because the force of the deploying front passenger airbag could cause death or serious injury to the child.

• Make sure that you have complied with all installation instructions provided by the child restraint manufacturer and that the system is properly secured.

### —Child restraint system

A child restraint system for a small child or baby must itself be properly restrained on the seat with either the lap belt or the lap portion of the lap/shoulder belt. You must carefully consult the manufacturer's instructions which accompany the child restraint system.

To provide proper restraint, use a child restraint system following the manufacturer's instructions about the appropriate age and size of the child for the child restraint system.

Install the child restraint system correctly following the instructions provided by its manufacturer. General directions are also provided under the following illustrations.

The child restraint system should be installed on the rear seat if your vehicle is equipped with rear seats. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.

### CAUTION

Vehicles with passenger airbag manual on-off switch—

• Never put infant or child age 1 to 12 in a passenger risk group on the right front seat with the passenger airbag manual on-off switch in the "ON" position. In the event of an accident, the force of the rapid inflation of the passenger airbag can cause death or serious injury to the child.

If you must put infant or child age 1 to 12 in a passenger risk group on the right front seat, make sure the passenger airbag manual on-off switch is in the "OFF" position and that the indicator light is on. (For details, see "SRS driver airbag and front passenger airbag" in this section.)

• After installing the child restraint system, make sure it is secured in place according to the manufacturer's instructions. If it is not restrained securely, it may cause death or serious injury to the child in the event of a sudden stop or accident.

**Vehicles without passenger airbag manual on-off switch—**

- Never install a rear-facing child restraint system on the front seat. In the event of an accident, the force of the rapid inflation of the airbag can cause death or serious injury if a rear-facing child restraint system is installed on the front seat.
- Unless it is unavoidable, do not install a forward-facing child restraint system on the front seat.
- A forward-facing child restraint system should be allowed to be installed on the front passenger seat only when it is unavoidable. Always move the seat as far back as possible, because the force of the deploying front passenger airbag could cause death or serious injury to the child.
- After installing the child restraint system, make sure it is secured in place according to the manufacturer's Instructions. If it is not restrained securely, it may cause death or serious injury to the child in the event of a sudden stop or accident.

**—Types of child restraint system**

Child restraint systems are classified into the following 3 types depending on the child's age and size.

- (A) Infant seat
- (B) Convertible seat
- (C) Booster seat

Install the child restraint system following the instructions provided by its manufacturer.

For instructions on how to use the anchor bracket, see "Using a top strap" in this section.

The child restraint lower anchorages approved for your vehicle may also be used. See "Installation with child restraint lower anchorages" in this section.

When not using the child restraint system, keep it secured with the seat belt or place it somewhere other than the passenger compartment. This will prevent it from injuring passengers in the event of a sudden stop or accident.

Your vehicle has anchors for securing the top strap of a child restraint system.

**(g) "ABS" Warning Light**

The light comes on when the ignition key is turned to the "ON" position. If the anti-lock brake system works properly, the light turns off after a few seconds. Thereafter, if the system malfunctions, the light comes on again.

When the "ABS" warning light is on (and the brake system warning light is off), the anti-lock brake system does not operate, but the brake system still operates conventionally.

When the "ABS" warning light is on (and the brake system warning light is off), the anti-lock brake system does not operate so that the wheels could lock up during a sudden braking or braking on slippery road surfaces.

If either of the following conditions occurs, this indicates a malfunction somewhere in the parts monitored by the warning light system. Contact your Toyota dealer as soon as possible to service the vehicle.

- The light does not come on when the ignition key is turned to the "ON" position, or the light remains on.
- The light comes on while you are driving.

A warning light turning on briefly during operation does not indicate a problem.

With rear differential lock: However, it is a normal operation for the light to be on with rear differential locked. At this time, the anti-lock brake system does not operate.

**(h) SRS Warning Light**

This light will come on when the ignition key is turned to the "ON" position. After about 5 seconds, the light will go off. This means the system of the airbag and front seat belt pretensioners are operating properly.

This warning light system monitors the airbag sensor assembly, front airbag sensors, front seat belt pretensioner assemblies, inflators, warning light, interconnecting wiring and power sources.

If either of the following conditions occurs, this indicates a malfunction somewhere in the parts monitored by the warning light system. Contact your Toyota dealer as soon as possible to service the vehicle.

- The light does not come on when the ignition key is turned to the "ON" position or remains on.
- The light comes on or flashes while driving.

**(i) Unengaged "Park" Warning Light (vehicles with automatic transmission)**

This light warns that the transmission "Park" mechanism is not engaged. If the front drive control lever is in the "N" position while the selector lever is in the "P" position, the transmission will disengage and the wheels will not lock.

**CAUTION**

To restore the park function, shift the front drive control lever out of "N", or the vehicle can move.
